Model: SCI10
Battery Charger / Maintainer
OWNERS MANUAL

1. IMPORTANT SAFETY INSTRUCTIONS – SAVE THESE INSTRUCTIONS.

This manual will show you how to use your charger safely and effectively. Please read, understand and follow these instructions and precautions carefully, as this manual contains important safety and operating instructions. The safety messages used throughout this manual contain a signal word, a message and an icon. The signal word indicates the level of the hazard in a situation.

**DANGER** Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury to the operator or bystanders.

**WARNING** Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury to the operator or bystanders.

**IMPORTANT** Indicates a potentially hazardous situation which, if not avoided, could result in damage to the equipment, vehicle or property.

**WARNING** RISK OF ELECTRIC SHOCK OR FIRE.

1.1 To reduce the risk of damage to the electric plug or cord, pull by the plug rather than the cord when disconnecting the charger.

1.2 An extension cord should not be used unless absolutely necessary. Use of an improper extension cord could result in a risk of fire and electric shock. If an extension cord must be used, make sure:
   • That the pins on the plug of the extension cord are the same number, size and shape as those of the plug on the charger.
   • That the extension cord is properly wired and in good electrical condition.
   • That the wire size is large enough for the AC ampere rating of the charger as specified in section 7.3.

1.3 Do not operate the charger with a damaged cord or plug; have the cord or plug replaced immediately by a qualified service person.

1.4 Do not operate the charger if it has received a sharp blow, been dropped or otherwise damaged in any way; take it to a qualified service person.

1.5 Do not disassemble the charger; take it to a qualified service person when service or repair is required. Incorrect reassembly may result in a risk of fire or electric shock.
1.6 WORKING IN THE VICINITY OF A LEAD-ACID BATTERY IS DANGEROUS. BATTERIES GENERATE EXPLOSIVE GASES DURING NORMAL BATTERY OPERATION. FOR THIS REASON, IT IS OF UTMOST IMPORTANCE THAT YOU FOLLOW THE INSTRUCTIONS EACH TIME YOU USE THE CHARGER.

1.7 To reduce the risk of a battery explosion, follow these instructions and those published by the battery manufacturer and the manufacturer of any equipment you intend to use in the vicinity of the battery. Review the cautionary markings on these products and on the engine.

2. PERSONAL PRECAUTIONS

2.1 Remove personal metal items such as rings, bracelets, necklaces and watches when working with a lead-acid battery. A lead-acid battery can produce a short-circuit current high enough to weld a ring or the like to metal, causing a severe burn.

2.2 Be extra cautious, to reduce the risk of dropping a metal tool onto the battery. It might spark or short-circuit the battery or other electrical part that may cause an explosion.

2.3 Use this charger for charging LEAD-ACID batteries only. It is not intended to supply power to a low voltage electrical system. Do not use this battery charger for charging dry-cell batteries that are commonly used with home appliances. These batteries may burst and cause injury to persons and damage to property.

2.4 NEVER charge a frozen battery.

2.5 Consider having someone nearby to come to your aid when you work near a lead-acid battery. Have plenty of fresh water and soap nearby in case battery acid contacts your skin, clothing or eyes.

2.6 If battery acid contacts your skin or clothing, immediately wash the area with soap and water. If acid enters your eye, immediately flood the eye with cold running water for at least 10 minutes and get medical attention right away. If battery acid is accidentally swallowed, drink milk, the whites of eggs or water. DO NOT induce vomiting. Seek medical attention immediately.

3. PREPARING TO CHARGE

3.1 Remove all cord wraps and uncoil the cables prior to using the battery charger.

3.2 If it is necessary to remove the battery from the vehicle to charge it, always remove the grounded terminal first. Make sure all of the accessories in the vehicle are off, to prevent arcing.

3.3 Clean the battery terminals before charging the battery. During cleaning, keep airborne corrosion from coming into contact with your eyes, nose and mouth. Use baking soda and water to neutralize the battery acid and help eliminate airborne corrosion. Do not touch your eyes, nose or mouth.

3.4 Add distilled water to each cell until the battery acid reaches the level specified by the battery manufacturer. Do not overfill. For a battery without removable cell caps, such as valve regulated lead-acid batteries (VRLA), carefully follow the manufacturer’s recharging instructions.

3.5 Read, understand and follow all instructions for the charger, battery, vehicle and any equipment used near the battery and charger. Study all of the battery manufacturer’s specific precautions while charging and recommended rates of charge.

3.6 Determine the voltage of the battery by referring to the vehicle owner’s manual. This charger is equipped with Auto Voltage Detection of 6 or 12 volts.

3.7 Make sure that the charger cable clips make tight connections.
4. **CHARGER LOCATION**

**WARNING** RISK OF EXPLOSION AND CONTACT WITH BATTERY ACID.

4.1 Locate the charger as far away from the battery as the DC cables permit.

4.2 Never place the charger directly above the battery being charged; gases from the battery will corrode and damage the charger.

4.3 Do not set the battery on top of the charger.

4.4 Never allow battery acid to drip onto the charger when reading the electrolyte specific gravity or filling the battery.

5. **FOLLOW THESE STEPS WHEN BATTERY IS INSTALLED IN VEHICLE**

**WARNING** A SPARK NEAR THE BATTERY MAY CAUSE A BATTERY EXPLOSION. TO REDUCE THE RISK OF A SPARK NEAR THE BATTERY:

5.1 Position the AC and DC cables to reduce the risk of damage by the hood, door and moving or hot engine parts. NOTE: If it is necessary to close the hood during the charging process, ensure that the hood does not touch the metal part of the battery clips or cut the insulation of the cables.

5.2 Stay clear of fan blades, belts, pulleys and other parts that can cause injury.

5.3 Check the polarity of the battery posts. The POSITIVE (POS, P, +) battery post usually has a larger diameter than the NEGATIVE (NEG, N, -) post.

5.4 Determine which post of the battery is grounded (connected) to the chassis.

5.5 For a negative-grounded vehicle, connect the POSITIVE (RED) clip from the battery charger to the POSITIVE (POS, P,+) ungrounded post of the battery. Connect the NEGATIVE (BLACK) clip to the vehicle chassis or engine block away from the battery. Do not connect the clip to the carburetor, fuel lines or sheet-metal body parts. Connect to a heavy gauge metal part of the frame or engine block.

5.6 For a positive-grounded vehicle, connect the NEGATIVE (BLACK) clip from the battery charger to the NEGATIVE (NEG, N, -) ungrounded post of the battery. Connect the POSITIVE (RED) clip to the vehicle chassis or engine block away from the battery. Do not connect the clip to the carburetor, fuel lines or sheet-metal body parts. Connect to a heavy gauge metal part of the frame or engine block.

5.7 Connect charger AC supply cord to electrical outlet.

5.8 When disconnecting the charger, disconnect the AC cord, remove the clip from the vehicle chassis and then remove the clip from the battery terminal.

6. **FOLLOW THESE STEPS WHEN BATTERY IS OUTSIDE VEHICLE**

**WARNING** A SPARK NEAR THE BATTERY MAY CAUSE A BATTERY EXPLOSION. TO REDUCE THE RISK OF A SPARK NEAR THE BATTERY:

6.1 Check the polarity of the battery posts. The POSITIVE (POS, P, +) battery post usually has a larger diameter than the NEGATIVE (NEG, N, -) post.

6.2 Attach at least a 24-inch (61 cm) long 6-gauge (AWG) insulated battery cable to the NEGATIVE (NEG, N, -) battery post.

6.3 Connect the POSITIVE (RED) charger clip to the POSITIVE (POS, P, +) post of the battery.

6.4 Position yourself and the free end of the cable you previously attached to the NEGATIVE (NEG, N, -) battery post as far away from the battery as possible – then connect the NEGATIVE (BLACK) charger clip to the free end of the cable.

6.5 Do not face the battery when making the final connection.

6.6 Connect charger AC supply cord to electrical outlet.

6.7 When disconnecting the charger, always do so in the reverse order of the connecting procedure and break the first connection while as far away from the battery as practical.

6.8 A marine (boat) battery must be removed and charged on shore. To charge it onboard requires equipment specially designed for marine use.
7. GROUNDING AND AC POWER CORD CONNECTIONS

**WARNING** RISK OF ELECTRIC SHOCK OR FIRE.

7.1 This battery charger is for use on a nominal 230V, 50 Hz circuit. (See the warning label on the charger for the correct input voltage.) The plug must be plugged into an outlet that is properly installed and grounded in accordance with all local codes and ordinances. The plug pins must fit the receptacle (outlet). Do not use with an ungrounded system.

7.2 **DANGER** Never alter the AC cord or plug provided – if it does not fit the outlet, have a proper grounded outlet installed by a qualified electrician. An improper connection can result in a risk of an electric shock or electrocution.

7.3 Recommended minimum AWG size for extension cord:
- 100 feet (30.5 meters) long or less – use a 16 gauge (1.31 mm²) extension cord.
- Over 100 feet (30.5 meters) long – use a 14 gauge (2.08 mm²) extension cord.

8. CONTROL PANEL

1. Charge Rate Button
2. AC Power
3. Connected LED
4. Battery Type/Mode Button
5. Charging LED
6. Charged LED

**NOTE:** See the Operating Instructions section for a complete description of the charger modes.

**Charge Rate Button**
Use this button to set the maximum charge rate. Press the button until the desired charge rate is selected.
- Charges and maintains small batteries. Maintains large batteries.
- Charges small batteries, such as those commonly used in garden tractors, snowmobiles and motorcycles. Not for charging large batteries.
- Charges automotive, marine and light truck batteries.

**NOTE:** Once the charger has started charging the battery; if you press the Charge Rate button once, the output current is shut off. If you press the Charge Rate button again, the current will go back on at the same setting it was when it was turned off. For example: The charger is charging a battery at the fast charge rate setting. If you press the Charge Rate button, the output is turned off. If you press the Charge Rate button again, the output will turn back on at the fast charge rate setting.

**Battery Type/Mode Button**
Set the type of battery to be charged, or Desulfation Mode:
- Ca/Ca (Calcium) – Calcium batteries are acid batteries impregnated with calcium.
- **AGM/GEL** (Absorbed Glass Mat/Gel) – AGM batteries have electrolyte absorbed in separators consisting of a sponge-like mass of matted glass fiber. Gel batteries contain gelled electrolytes. These batteries are sealed with valves and should not be opened.
- **(Desulfation Mode)** – A special mode of operation designed for sulfated batteries.

**NOTE:** When charging a battery that is not marked, check the manual of the item which uses the battery for the correct battery type. Make sure the battery complies with the safety instructions in Section 2.3.
9. OPERATING INSTRUCTIONS

**WARNING** This battery charger must be properly assembled in accordance with the assembly instructions before it is used.

**Battery Information**
This charger can be used with 6 and 12V batteries with rated capacities of 5 Ah to 120 Ah.

**Charging**
1. Ensure that all of the charger components are in place and in good working condition, for example, the plastic boots on the battery clips.
2. Connect the battery, following the precautions listed in sections 5 and 6.
3. Connect the AC power following the precautions listed in section 7.
4. Select the appropriate settings for your battery.

**IMPORTANT** This charger does not have an ON/OFF switch. ON and OFF are controlled by plugging in the charger to the AC wall outlet. The charger will not supply current to the battery clips until a battery is properly connected. The clips will not spark if touched together.

**Battery Connection Indicator**
If the charger does not detect a properly connected battery, the CONNECTED LED will not light. Charging will not begin if the CONNECTED LED is not on.

**Automatic Charging Mode**
When a charge rate is selected, the charger is set to perform an automatic charge. When an automatic charge is performed, the charger switches to the maintain mode automatically after the battery is charged.

**Aborted Charge**
If charging cannot be completed normally, charging will abort. When charging aborts, the charger’s output is shut off and the CHARGING LED will flash. In that state, the charger ignores all buttons. To reset after an aborted charge, unplug the charger from the AC outlet, wait a few moments and plug it back in.

**Desulfation Mode**
**IMPORTANT** Battery must be removed from the car when using this mode, or damage to the car’s electrical system may result.

If the battery is left discharged for an extended period of time, it could become sulfated and not accept normal charge. If you select , the charger will switch to a special mode of operation designed for sulfated batteries. If successful, the charger will fully desulfate and charge the battery, then the green LED will go on. If desulfation fails, the charger will abort and the CHARGING (yellow) LED will blink.

**Completion Of Charge**
Charge completion is indicated by the CHARGED LED. When lit, the charger has stopped charging and switched to the Maintain Mode of operation.

**Maintain Mode**
When the CHARGED LED is lit, the charger has started Maintain Mode. In this mode, the charger keeps the battery fully charged by delivering a small current when necessary. The voltage is maintained at a level determined by the battery type selected.

**Maintaining a Battery (2A Charge Rate)**
This charger has a maintenance setting that maintains both 6 and 12 volt batteries, keeping them at full charge. On this setting, it can charge small batteries and maintain both small and large batteries. We do not recommend charging a large battery on the maintenance setting.

**NOTE:** The maintain mode technology utilized in Schumacher’s chargers allows you to safely charge and maintain a healthy battery for extended periods of time. However, problems with the battery, electrical problems in the vehicle, improper connections or other unanticipated conditions could cause excessive current draws. As such, occasionally monitoring your battery and the charging process is recommended.

**Fan**
The charger is designed to control its cooling fan for efficient operation. It is normal for the fan to start and stop when maintaining a fully charged battery. Keep the area near the charger free of obstructions to allow the fan to operate efficiently.
10. MAINTENANCE INSTRUCTIONS

10.1 After use and before performing maintenance, unplug and disconnect the battery charger (see sections 5, 6 and 7).

10.2 Use a dry cloth to wipe all battery corrosion and other dirt or oil from the battery clips, cords and the charger case.

10.3 Ensure that all of the charger components are in place and in good working condition, for example, the plastic boots on the battery clips.

10.4 Servicing does not require opening the unit, as there are no user-serviceable parts.

10.5 All other servicing should be performed by qualified service personnel.

11. MOVING AND STORAGE INSTRUCTIONS

11.1 Store the charger unplugged, in an upright position. The cord will still conduct electricity until it is unplugged from the outlet.

11.2 If the charger is moved around the shop or transported to another location, take care to avoid/prevent damage to the cords, clips and charger. Failure to do so could result in personal injury or property damage.

LIMITED WARRANTY

SCHUMACHER ELECTRIC CORPORATION, 801 BUSINESS CENTER DRIVE, MOUNT PROSPECT, IL 60056-2179, MAKES THIS LIMITED WARRANTY TO THE ORIGINAL RETAIL PURCHASER OF THIS PRODUCT. THIS LIMITED WARRANTY IS NOT TRANSFERABLE OR ASSIGNABLE.

Schumacher Electric Corporation (the “Manufacturer”) warrants this battery charger for two (2) years from the date of purchase at retail against defective material or workmanship that may occur under normal use and care. If your unit is not free from defective material or workmanship, Manufacturer’s obligation under this warranty is solely to repair or replace your product with a new or reconditioned unit at the option of the Manufacturer. It is the obligation of the purchaser to forward the unit, along with proof of purchase and mailing charges prepaid to the Manufacturer or its authorized representatives in order for repair or replacement to occur.

Manufacturer does not provide any warranty for any accessories used with this product that are not manufactured by Schumacher Electric Corporation and approved for use with this product. This Limited Warranty is void if the product is misused, subjected to careless handling, repaired, or modified by anyone other than Manufacturer or if this unit is resold through an unauthorized retailer.

Manufacturer makes no other warranties, including, but not limited to, express, implied or statutory warranties, including without limitation, any implied warranty of merchantability or implied warranty of fitness for a particular purpose. Further, Manufacturer shall not be liable for any incidental, special or consequential damage claims incurred by purchasers, users or others associated with this product, including, but not limited to, lost profits, revenues, anticipated sales, business opportunities, goodwill, business interruption and any other injury or damage. Any and all such warranties, other than the limited warranty included herein, are hereby expressly disclaimed and excluded. Some states do not allow the exclusion or limitation of incidental or consequential damages or length of implied warranty, so the above limitations or exclusions may not apply to you. This warranty gives you specific legal rights and it is possible you may have other rights which vary from this warranty.

THIS LIMITED WARRANTY IS THE ONLY EXPRESS LIMITED WARRANTY AND THE MANUFACTURER NEITHER ASSUMES OR AUTHORIZES ANYONE TO ASSUME OR MAKE ANY OTHER OBLIGATION TOWARDS THE PRODUCT OTHER THAN THIS WARRANTY.

DECLARATION OF CONFORMITY

We, Schumacher Electric Corporation
801 East Business Center Drive
Mount Prospect, Illinois, 60056, U.S.A.

certify that the **Battery Charger/Maintainer Model SCI10** complies with the following standards:

- Low Voltage Directive (LVD) 2006/95/EC,
- EN 60335-2-29:2004
- 89/336/EEC and 93/68/EEC

and therefore conforms with the protection requirements relating to safety and electromagnetic compatibility.

The year in which the CE marking was affixed is “2013”.

Manufacturer:

![Signature]

John Waldron
President
January 7, 2013

Hereby declares that the equipment **Model SCI10** is compliant to the DIRECTIVE 2002/95/EC (RoHS Directive), as well as DIRECTIVE 2011/65/EU (RoHS Recast), on the restriction of the use of certain hazardous substances in electrical and electronic equipment while:

The parts do not exceed the maximum concentrations of 0.1% by weight in homogenous materials for lead, mercury, hexavalent chromium, polybrominated biphenyls (PBB) and polybrominated diphenyl ethers (PBDE), and 0.01% for cadmium, as required in Commission Decision 2005/618/EC of 18 August 2005.

January 7, 2013
